Join them as they explain cell theory and the mechanics of cell cycles, growth, and division. In this chapter, you can first learn about cell structures and their function.

Cell Biology & Division - Videos & Lessons | Study.com

Cell division consists of two phases— nuclear division followed by cytokinesis. Nuclear division divides the genetic material in the nucleus, while cytokinesis divides the cytoplasm. There are two kinds of nuclear division—mitosis and meiosis. Mitosis divides the nucleus so that both daughter cells are genetically identical.

Cell Division - CliffsNotes Study Guides

The regular pattern of growth, DNA duplication, and cell division that occurs in eukaryotic cells. Mitosis. The division of the cell nucleus and its contents. During mitosis, the nuclear membrane dissolves, the duplicated DNA condenses around proteins and separates, and two new nuclei form. Cytokinesis.
