initiated, which perhaps formed the basis of modern metrology. Engineering metrology deals with the applications of measurement science in manufacturing processes. It provides a means of assessing the suitability of measuring instruments, their calibration, and the quality control of manufactured components. A product that is not

communications, energy, medical sciences, food sciences, environment, trade, transportation, and military applications.

□ Metrology concerns itself with the study of measurements.

□ Measurement is an act of assigning an accurate and precise value to a physical variable.

□ The physical variable then gets transformed into a measured variable.

□ Meaningful measurements require common measurement standards and must be performed using them.

## **Basic Principles of Engineering Metrology**

Introduction To Engineering Metrology -Types Of measurements Metrology is the name given to the science of pure measurement. Engineering Metrology is restricted to measurements of length & angle.

## **Introduction To Engineering Metrology -Types Of measurements**

- Metrology is the science of measurement
- Dimensional metrology is that branch of Metrology which deals with measurement of “dimensions“ of a part or workpiece (lengths, angles, etc.)
- Dimensional measurements at the required level of accuracy are the essential link between the designers’ intent and a delivered product.

## **Metrology - IITK**

Metrology is the science of measurement. It is how we ensure that we can confidently compare the results of measurements made all over the world. These principles can apply to products or a services, but I’m going to focus on manufacturing and how these three fundamental concepts relate to each other in that context.
