wire mooring lines, the elasticity of the tails introduces energy that can significantly increase the snap-back hazard. Elongation is proportional to the length of the tail. The fitting of longer synthetic tails, e.g. 22m tails from 11m tails, proportionally increases the stored energy and the amount of snap-back that can be expected.

OCIMF - Mooring Equipment Guidelines (MEG)

Mooring Equipment Guidelines (MEG4) Fourth Edition 2018 Mooring a ship to a berth is a common function for the maritime industry, however incidents that harm ship and terminal personnel still occur. This publication establishes recommended minimum requirements that will help ship designers, terminal designers, ship operators and mooring line ...

Mooring Equipment Guidelines (MEG4) Fourth Edition 2018

This edition is aligned with the guidance in MEG4 and updates and replaces Effective Mooring, Third Edition. New in the fourth edition: • Emphasis on the whole mooring crew being responsible for safety. • Removed guidance on marking snap-back zones: the whole mooring deck is a danger zone. • More guidance on barges.

Effective Mooring, Fourth Edition. - CD/DVDs

Mooring Pattern (Source: OCIMF MEG-4) MEG4 provides the below guidelines for a generic mooring line layout. Breast mooring lines should be at an angle less than 15° to the perpendicular axis of the ship.; Spring mooring lines should be at an angle less than 10° to the side of the ship.; Maximum vertical angles of 25 degrees should be assumed for the lightest ballasted condition.

Calculating a Ship's Design MBL using OCIMF MEG-4 ...

The design basis contains all the essential information and requirements and mooring design is an iterative process that requires an integrated systematic approach. The design process of a new mooring system involves defining the type of the mooring system, mooring profile, mooring pattern, line composition, anchor, and onboard mooring equipment.
