Strut mount is one of the important interconnected parts of McPherson suspension system, which undergoes through high forces which are generated due to road bumps and most probably tends to fail. Strut mount insulates the tire noise and vibration from the vehicle and it is the mounting point to connect vehicle chassis.

### Literature review on analysis of various Components of ...

The MacPherson suspension, used as front suspension on the car model, includes the lower arm, the shock absorber (body and rod), the steering arm and a chassis to fix properly all the components. The lower arm is coupled to the chassis using a rotational joint and to the shock absorber body using a spherical joint.
