Non Viscous Solution

A non-viscous fluid has a viscosity of zero. Viscosity is ratio of shearing stress to rate of shearing strain, so fluids that

resist zero or low stress - or have very high rates of strain - will have viscosity close to zero. The only fluid that is close to zero is liquid helium at roughly 2°K.

What is non-viscous fluid? - Quora

A non viscous fluid is the fluid which has no viscosity i.e no resistance to its flow or internal friction. This means they flow

without any loss of kinetic energy.

Superfluids : .These fluids have the property to flow endlessly without any energy loss. The property of superfluidity is only shown by liquids and gas and the temperature has to be very low(<4 kelvin) .

Non-Newtonian Liquids – liquids that change in viscosity when sheared.

Thixotropic liquid — viscosity decreases as the rate of shear increases, making it difficult to start flowing, but once started, difficult to stop flowing.

Examples are emulsions, industrial rubber cements, and ketchup.
